

become a dataminer certified expert

The DataMiner® Open Training Sessions are open public sessions that are held at our offices in Europe, in the US and in Singapore. They are led by seasoned subject matter experts and offer a complete training program with five separate tracks: **DataMiner Operator**, **DataMiner System Administrator**, **DataMiner Advanced Applications**, **DataMiner Driver Development Initiation** and **DataMiner Driver Development Mastership**. Each track includes theoretical presentations, demonstrations and hands-on lab exercises. You can take the entire program or specific tracks, depending on your level of experience.

DATAMINER OPERATOR

This course teaches you how to use the DataMiner System on a daily basis to manage your operations and interact with your operational ecosystem.

DATAMINER SYSTEM ADMINISTRATOR

This course teaches you everything about setting up and maintaining a DataMiner System, such as adding new devices, managing user accounts, and much more.

DATAMINER ADVANCED APPLICATIONS

This course teaches you how to configure and use advanced DataMiner applications, such as the Correlation, Automation, and DMS Business Intelligence modules.

The DataMiner Open Training sessions are an excellent opportunity to learn all about DataMiner, to brush up on your existing knowledge and skills, or to further leverage your investments in DataMiner.

DATAMINER OPERATOR

This course provides a complete overview of the standard DataMiner System and shows you how to use the platform to interact with your operational ecosystem. It teaches you to access and use the system to consult active and historical alarms, start real-time sessions with managed devices, navigate through the system, and use any of the operator user interfaces.

> **DURATION: 2 DAYS**

March 2 - 3, 2020 from 9 a.m. to 4 p.m.

DATAMINER SYSTEM ADMINISTRATOR

This course teaches you everything about setting up and maintaining a DataMiner System. This includes adding new devices and new drivers, managing user accounts, setting up backup policies, creating graphical Visual Overview presentations, defining alarm thresholds, etc.
